The past 5 fiscal years and current year during which the auditor conducted (will conduct) an independent audit of the annual accounting statements of the issuer

Accounting (financial) statements (RAS)	Consolidated financial statements (IFRS)
2015	2015

2016	2016
2017	2017

Factors that may affect the independence of the auditor (audit firm) from the issuer, including material interests binding the auditor (persons serving on audit firm's management and control bodies) with the issuer (persons serving on issuer's management and control bodies): *none*

Selection:

Tender conditions:

*An auditor nominee is approved in the course of a tender (open negotiations without preliminary qualified selection). Key requirements for audit firms to comply with are:*

- *to be a member in a self-regulated auditor organization;*
- *not to be under liquidation or bankruptcy proceedings;*
- *not to be under suspension of operations as stated by the Russian Administrative Code as of the tender date;*
- *to have no debt on taxes, levies and other obligatory payments to various budgets or state non-budgetary funds for the previous calendar year (exceeding 25% of book asset value as stated in financial statements as of the most recently completed reported period);*
- *not to be on the unfair contractors list;*
- *not to fall under conditions stated by the Federal Auditor's Law.*

Auditor nomination procedure:

*The Charter states that an auditor nominee to be engaged for independent audit of the issuer's annual financial statements is recommended by the Board of Directors to the AGSM after a tender (arranged by the issuer and/or Rosseti). The AGSM approves the auditor (audit firm) of the Company. The Jun.05, 2017 meeting (Minutes No.10 dated as of 08.06.2017) has approved OOO RSM RUS as the Company's auditor for 2017. A nominee to be engaged for audit of consolidated interim financial statements prepared under IFRS is not processed by the AGSM. The auditor had no special assignments.*

Remunerations (determination procedure, amount, etc.):

*The Charter states that the Board of Directors decides on auditor fee amount, with fee and manner of payment stipulated by a contract concluded between the Company and auditor.*

*The auditor fee for the audit of FY2015 financial statements prepared under RAS and IFRS was approved by the Board of Directors on 18.09.2015 (Minutes No.176 dated as of 21.09.2015) at RUB 2,611,251.52 plus 18% VAT.*

*The auditor fee for the audit of FY2016 financial statements prepared under RAS and IFRS was approved by the Board of Directors on 15.08.2016 (Minutes No.205 dated as of 15.08.2016) at RUB 2,611,251.52 plus 18% VAT.*

*The auditor fee for the audit of FY2017 financial statements prepared under RAS and IFRS was approved by the Board of Directors on 31.01.2017 (Minutes No.243 dated as of 31.08.2017) at RUB 2,611,251.46 plus 18% VAT.*

*Rest payment under FY2017 audit contract No.171 a 078 dated as of 25.09.2017 of RUB 2,089,001.22 was paid in 1Q 2018. There are no deferred and overdue payments for the auditor services.*

Potential factors that may challenge the auditor's independency:

- *the auditor's (or its officers') share in the charter capital of the issuer: no share;*
- *money borrowed by the auditor (its officers) from the issuer: no borrowings;*
- *close business contacts (co-promotion of the issuer's services or joint business, etc.) and kinship: no close contacts and kinship;*
- *the issuer's officers serve simultaneously as the auditor's officers.*

*The issuer and auditor comply with the law (in particular, with Federal Auditor's Law No.119-FZ dated as of 07.08.2001). Section 12 states that the audit cannot be performed by:*

*1) auditors, being founders (stockholders) of audited entities, directors, accountants and other persons liable for accounting and financials administration;*

*2) auditors with a close kinship (parents, spouses, brothers, sisters, children as well as brothers, sisters, parents and children of the spouses) with the founders (stockholders) of audited entities, directors, accountants and other persons liable for accounting and financials administration;*

*3) auditor companies, with directors and other officers being founders (stockholders) of audited entities, officers, accountants and other persons liable for accounting and financials administration;*

*4) auditor companies, with directors and other officers being in a close kinship (parents, spouses, brothers, sisters, children as well as brothers, sisters, parents and children of the spouses) with the founders (stockholders) of audited entities, officers, accountants and other persons liable for accounting and financials administration;*

*5) auditor companies in relation to audited entities being their founders (stockholders); in relation to audited entities, with the auditor companies being their founders (stockholders); in relation to subsidiaries, branches and representative offices of audited entities as well as in relation to companies possessing the same founders*

(stockholders) as the auditor company;

6) auditor companies and individual auditors, rendering services on accounting recovery and administration as well as financials administration for natural and legal entities (in relation to these persons) during three years prior to the audit.

- Ongoing improvement of overall efficiency by analyzing and evaluating existing risks;*
- Securing of reliable performance of the Russian grid sector;*
- Achievement of optimal efficiency for the RMS of the Company and its SACs;*
- Timely and in-depth informational and analytical support of decision-taking and planning processes of the Company and its SACs.*

*RM-related decisions of the C-level executives comply with laws of Russia and ensure reasonable proportion of positive effect and incurred expenses. Executing RM-related decisions, the Company regularly analyzes their practical efficiency. The Company singles out the following RM methods:*

- 1. Insurance of property, production units, vehicles and machinery, civil liability, health services and other types of insurance.*
- 2. Waiver of unreliable contractors.*
- 3. Diversification of purchases of raw materials, materials, equipment and services to reduce Company's dependence on certain contractors.*

#### **2.4.1. Industry risks**

##### **1) Tariff risks.**

*State policy in tariffs lies in inflation control and stipulates revisions of regulated tariffs for 2017-2019 below actual inflation on the back of advanced wholesale price hikes. This creates a risk of regulators' setting tariffs below economically feasible levels. Energy transmission and connection to electric networks are regulated by the state. The state strives to cap transmission tariffs and connection fees (including privileged fees for separate categories of consumers); such policy may limit tariff resources for investment and operating activities of the Company. Tariff setting by regulators has a direct impact on Company's revenues, ending up with:*

- 1. Risk related to setting of tariffs below economically feasible levels;*
- 2. Risk related to revenues reduction impacted by changes of actual transmission voltage breakdown, compared to revenues approved when tariffs were set;*
- 3. Risk related to revenues reduction impacted by slumped actual supply on the back of energy saving, if compared to revenues in tariff and balance decisions. Company's total supply is mostly comprised of energy transmission for industrial enterprises. If their production declines or they acquire or launch own generating facilities, it is immediately followed by significant revenues implosion;*
- 4. Risk related to additional cross-subsidy expenses that impedes setting of economically feasible transmission tariffs;*
- 5. Risks arising from evolving legislation regarding pricing of the electric sector;*
- 6. Risks arising from impossibility to compensate shortfall in revenue of the previous periods in full, to record shortfall in revenue from privileged connection of separate categories of filers in full due to set transmission tariff ceiling.*

*Minimization of consequences:*

- 1. Close cooperation with regional regulators regarding economic feasibility of Company's expenses.*
- 2. Filing with the Federal Antimonopoly Service of proposals regarding balance parameters for the next year to be approved in the consolidated regional forecast balance of electricity production and supply.*
- 3. Preparation and filing with the Federal Antimonopoly Service of initiatives related to improvement of Russian laws on pricing in the energy sector.*
- 4. Challenging of tariffs set in contravention of the law and infringing Company's rights and legitimate interests in administrative and judicial proceedings.*
- 5. Execution of the cost control program, providing well-balanced planning of operations in line with approved tariff decisions.*
- 6. Cooperation with local authorities on preparation of long-term territorial development programs and approval of funding volumes and resources for Company's investment programs.*
- 7. Discharge of liabilities pursuant to investment and energy efficiency programs.*
- 1. 8. Cooperation with regional tariff regulators on preparation of supporting documents related to required ultimate electricity transmission tariffs.*

##### **2) Reduced supply risk**

*The risk appears as a result of reduced consumption and optimization of external power supply by large consumers.*

*Minimization of consequences:*

*Monitoring of electricity consumption by large consumers that plan to construct and/or acquire generating and alternative facilities, generation of a 12M net supply forecast, adjusted for current electricity consumption.*

*Discussion and approval by consumers of target consumption volumes to be included into next year's contracts and filed with the tariff regulators (with a view to prevent approval of volumes ignoring current consumption dynamics).*

### **3) Risks related to connection**

*The risks derive from possible deficit of resources to fund activities related to execution of connection contracts; filers' failure to discharge their liabilities related to connection contracts; reduction of maximum capacity in connection requests by filers. These factors may have an adverse impact on connection revenues.*

*Minimization of consequences:*

- 1. Monitoring of requests to be used in generation of next year's forecast demand for connection.*
- 2. The Company polishes its business processes related to processing of connection requests and execution of connection contracts. Thus, we deployed the automated connection control system designed to optimize connection-related procedures for employees.*
- 3. We prepared measures focusing on enhancement of connection efficiency, included into the corporate connection-related roadmap.*
- 4. We prepared control matrices for "Connection" process, stipulating causes of trouble, factors, preventive actions, control procedures and designated persons liable for each connection process stage.*
- 5. We also provide methodological support, incl. arrangement of videoconference calls with branches to discuss issues related to organizational management in units engaged in connection process due to statutory revisions and revealed connection-related faults, opinion of courts and other watchdogs.*
- 6. The Company cooperates with regional tariff regulators providing grounds for inclusion of privileged connection expenses into transmission tariff, as stated by the law.*
- 7. The Company also participates in legislative initiatives promoted by PAO Rosseti and NP TSO Association to cater to the needs of grid companies, to promptly introduce required amendments to eliminate or reduce risks from regulated operations.*
- 8. The Company conducts a tariff campaign focusing on enforcing approval of economically justified connection fees for all kinds of works, subject to statutory regulation.*

### **4) Risk related to arrears in payments for electricity transmission services (disputed or undisputed overdue receivables) by consumers**

*The risk derives from still evolving mechanisms for stimulation of consumers to pay on time for electricity transmission services and adverse effect of macroeconomic factors (lowered paying capacity of consumers).*

*Minimization of consequences:*

- 1. Interaction with contractors to secure timely discharge of contractual liabilities and cancellation of overdue debt.*
- 2. Legal collection focusing on debt collection (delay fees) and creation of favorable court practices.*
- 3. Generation of proposals to be introduced to legislation in effect to strengthen payment discipline, including delay fees.*
- 4. Implementation of direct-supplier-contract policy.*
- 5. Elimination of conflict-originating reasons, reduction of disputed and overdue debt for the rendered services.*
- 6. Collaboration with regional instrumentalities (commissions) that monitor payments for energy and its transmission to find a mutual debt-reducing solution.*
- 7. Search for alternative solutions focusing on debt reduction caused by payment failures by providers of last resort (ESC).*
- 8. The Company implements Board-approved programs related to perspective development of metering systems on retail energy market in grids.*
- 9. Filing of statements with federal executive bodies, supervisors and watchdogs.*
- 10. Cooperation with Rosfinmonitoring units, court bailiffs service.*
- 11. Filing of reports on persistent non-payers with law enforcements to decide on prosecution methods.*

#### **2.4.2. Federal and regional risks**

##### **1) Risks related to political and economic situation.**

*The risks derive from lowered economic activity of the regions of operation, increased cost of borrowings, impacted, in its turn, by unstable global environment, international sanctions, downgrade of credit ratings and inflation hikes. These factors may have an adverse impact on Company's revenues and market value.*

*Minimization of consequences:*

*We take measures to replace imported materials and equipment with domestic ones, expand access for small and medium businesses to procurements in line with the Federal Procurement Law.*

##### **2) Risks related to potential conflicts, announcement of the state of emergency and strikes in the regions**

*The risks may arise from possible illegal interference into Company's performance, incl. terrorist attacks (transnational and national terrorism). These attacks may have an adverse effect on the Company's operations.*

*Minimization of consequences:*

*If political and economic situation in Russia or any region is unstable and may impact Company's performance, the Company shall take antirecession measures to reduce this negative impact (cost-cutting and cost optimization, reduction of investment plans, reduction of loans and borrowings to fund operations, well-balanced financial policy). The Company actively collaborates with state agencies and other stakeholders to diminish the influence of these risks. Possibility of a military conflict and announcement of the state of emergency in the country or regions is low. In case of a military conflict the Company may encounter risks when its property, plant and equipment are destroyed. These risks are covered by insurance.*

*3) Geographical risks, including additional exposure to natural disasters, possible suspension of transport connection*

*These risks derive from emergencies as a result of natural disasters (hurricanes, tropical downpours, floods, snow storms, icing, fires, explosions, etc.), disrupting electricity supply and transport connection in the region.*

*Regions of the Company's service area have a developed transport infrastructure and are not exposed to the risks related to transport connection stoppage due to their remoteness and/or inaccessibility.*

*Minimization of consequences:*

*The Company prepares for autumn-winter operations, each branch being certified in a proper manner. All branches have a long-term experience of successful quick liquidation of consequences from natural disasters, badly influencing facilities and network infrastructure.*

### 2.4.3. Financial risks

*1) Fx risks.*

*An adverse impact on the Company's performance due to changes of Fx rates.*

*Minimization of consequences:*

*Borrowings and payments with customers and suppliers are nominated in Russian currency.*

*But still, in light of possible imported components in goods or equipment purchased by OAO IDGC of Urals, the Company realizes its import-substitution policy focusing on project solutions to minimize usage of imported equipment and materials. Optionally, it considers conclusion of long-term contracts with stable equipment prices for projects depending on imported equipment and materials.*

*2) Interest rate risks*

*Influence on possible increase of Company's costs related to capital raising to fund its investment programs.*

*Minimization of consequences:*

*Improvement of debt structure depending on current credit conditions; oversight of reciprocal discharge of liabilities on credit contracts in force; monitoring of the debt market during debt-attraction arrangements; auctions and contracts with largest Russian banks, able to credit large sums at moderate rates, diversification of credit ceiling portfolio*

*3) Inflation-based risks*

*Influence of CPI growth on interest payable, costs, profitability and, as a consequences, financial profile and obligations fulfillment of the Company.*

*Minimization of consequences:*

*1. Operating under inflation conditions the Company has developed the Enhanced Efficiency and Cost-Cutting Program.*

*2. The Company concludes long-term contracts (3-5 years) with fixed prices.*

### 2.4.4. Legal risks

*1) Legal risks*

*Risks related to changes in legislation, court practices on Company's operations and balance of interests of other energy sector players.*

*Minimization of consequences:*

*1. Ongoing improvement of tax calculation methodology and oversight of its compliance with legislation in force.*

*2. All operations undergo compulsory legal pre-examination.*

*3. Transactions undergo compulsory legal pre-examination to consider whether they fall under corporate procedures stated by laws and/or charter of the Company. If such approval is required, competent bodies of the Company examine such transactions.*

*4. Our register is administered by a professional registrar (AO STATUS).*

*5. The Company enforces its strategy related to consolidation of grid facilities on its service area that may increase electricity transmission volumes in the long run.*

## 2) Compliance risk

Risks related to regulator's sanctions as a result of possible non-compliance of Company's operations with legislation, local regulatory documents and other enactments, subject to mandatory compliance.

Minimization of consequences:

1. The Company monitors legislation and all introduced revisions.
2. Transactions undergo compulsory legal pre-examination to consider whether they fall under corporate procedures stated by laws and/or charter of the Company. If such approval is required, competent bodies of the Company examine such transactions.
3. Challenging of tariffs set in contravention of the law and infringing Company's rights and legitimate interests in administrative and judicial proceedings.
4. The Company regularly conducts compliance control and financial monitoring to manage its reputation.
5. The Company has adopted a set of bylaws regulating anti-corruption norms, their evaluation and implementation, settlement of competing interests, whistleblowing statement processing, Corporate Ethics and On-Duty Conduct Code.
6. The Company has established a unit liable for anti-corruption monitoring.
7. An anticorruption clause is included in all contracts concluded by the Company.
8. Expert (anti-corruption) evaluation of procurement participants.
9. Corruption whistleblowing hotline.
10. Oversight of timely disclosure of the Company's insider information. Inclusion of a section on keeping insider information confidential in contracts under which insider information is to be processed.

### 2.4.5. Reputation risks

#### Reputation risk

The risk may arise from possible failures to discharge liabilities before customers and contractors. The risk may derive from possible loss of effective communications with various target audiences, incl. as a consequence of failures to execute key production plans and discharge liabilities before customers and contractors in full.

Minimization of consequences:

1. Development of Company's stakeholder-related priorities to define priorities related to reputation management and in-depth analysis of risk management priorities.
2. Strict compliance with the Company's Regulations on the Uniform Communications Policy stipulating PR rules.
3. Timely response to situations related to technological disturbances in the Company's service area and other production-related upsets.
4. Consistent positive messaging about Company's operations.
5. Disclosure of at least 600 releases on Company's operations, at least 8.0 thous. positive media mentions, achievement of KPI "Quality of messaging" at a minimum of 5% (negative mentions/total mentions).
6. Timely disclosure of information as an issuer and natural monopoly.
7. Participation in large Russian exhibitions, supported by regional authorities, to arrange efficient dialogue with business partners and form a positive image of the Company.
8. Regular oversight of compliance and financial monitoring for reputation management.
9. Timely congratulations of authorities, partners and other stakeholders to form a positive image of the Company.
10. Arrangement of activities in social media and blogosphere, regular update of Company's accounts on popular web-sites. Special attention is paid to communications with general public and mass media through social media and blogosphere during restoration of power supply after natural disasters. SNS accounts are also used to keep the target audience aware of prevention of injuries from electric equipment, non-contracted and unmetered electricity consumption, connection and power engineer job prestige.

### 2.4.6. Strategic risks

#### Strategic risk

Risk of failure to achieve strategic goals and objectives of the Company due to potential changes in internal and external environment of the Company.

Minimization of consequences:

Management of strategic risks is interpreted as a totality of actions aimed at implementation of activities and minimization of risks related to the implementation of the energy sector development strategy in light of regional development strategies. As strategic risks impacts the achievement of goals set by the energy sector development strategy and PAO Rosseti's long-term development program, covering also Company's development-related activities, management of the key operating risks and risks of Company's business processes is one of the elements managing strategic risks under the adopted Risk Management Policy.

## 2.4.7. Risks related to Company's operations

### 1) Operating and technological risk

*Deteriorated reliability of energy supply caused by accidents of natural or technogenic character resulting in equipment faults; high level of equipment with excessive service life; failure to comply with requirements in terms of excess of set values of technological exploitation parameters.*

*Minimization of consequences:*

*The Company takes the following steps:*

- 1. Clearing and widening of 0.4-220 kV power lines corridors.*
- 2. Reconstruction of grid facilities.*
- 3. Enhancement of reserve power supplies, machinery and special-purpose vehicles for emergency recovery works.*
- 4. Revised program of grid facility upgrade (revamp).*
- 5. Upgrade of communications and telematics.*
- 6. Improvement of systems, liable for collection and transmission of information, analysis of technological failures, forecast of consequences, incl. implementation of the automated recovery resource management system (ARRMS).*
- 7. Improvement of the system managing emergency inventories during emergency recovery works.*
- 8. Increase of quality of mobile emergency recovery teams.*
- 9. Training, supervision and examining of operating personnel.*

### 2) Investment risk

*Reduction of sources to fund Company's investment programs if its financial profile is deteriorated and, as a result, reduction of revenues from tariffs on the back of non-execution of investment programs. Violation of deadlines for commissioning of facilities from investment programs due to failures to discharge or discharge on time liabilities by contractors and suppliers.*

*Minimization of consequences:*

- 1. When the Company includes investment projects into its investment program, it aligns the projects with regional development plans. The Company files investment and funding volumes with the Ministry of Energy for approval.*
- 2. The Company cuts per-unit investment expenditures by optimizing program structure, performing in-house works, generating typical technical solutions, annual monitoring of per-unit costs of investment projects as well as by reducing project value during planning (use of consolidated indices of construction costs, analysis of project solutions at incomplete facilities).*
- 3. The Company enhances quality of projects and investment efficiency by reducing per-unit construction costs, high loading of commissioned facilities, generating and implementing systems for comparative analysis of per-unit CIW costs and for investment management.*
- 4. The Company continues its efforts to align investment plans and territorial development plans. Maximum integration of strategic documents, territorial development schemes, information exchange help optimize terms and price of connection.*

### 3.1.3. Incorporation and Evolution

*The Issuer is created for the time being.*

*Historical Milestones:*

*Interregional Distribution Grid Company of Urals (shortly named as IDGC of Urals) was incorporated Feb. 28, 2005 in Yekaterinburg (the Urals Federal District) during energy reforms in Russia. The incorporation followed the differentiation of firms dealing with the production, transfer, distribution and sale of electric and heat energy as well as dispatcher management into separate business units. In Dec. 2007 the Federal Antimonopoly Service of Russia approved the restructuring of the Company in the form of the merger of Sverdlovenergo, Chelyabenergo, Permenergo and Kurganenergo. In Jan. 2008 the EGMs of Sverdlovenergo, Chelyabenergo, Permenergo voted for the restructuring in the form of the merger and also approved the merger agreement. The reform ended Apr. 30, 2008 when information on the discontinuation of activities of Sverdlovenergo, Chelyabenergo, Permenergo as a result of the merger into OAO IDGC of Urals was introduced to the United State Legal Entities Register. These merged companies became branches of OAO IDGC of Urals.*

*Mission of OAO IDGC of Urals: Provision of reliable electricity supply and hassle-free technological connection of consumers to the electric networks in the Sverdlovsk, Perm and Chelyabinsk regions with due consideration of energy efficiency, health, safety and environment priorities. The Company's goals are set after evaluation of their accomplishment potentiality, key operating risks and risks of primary and minor business operations, to comply with Strategic priorities, disclosed in Chapter 4 (Para. 1-4) of the Strategy for Development of the Russian Electric Grid Complex (adopted by the Government Decree dated as of 03.04.13 No.511-r, numbers of the Company's business plan and C-Level KPI system of the Company:*

*1) Provision of long-term reliable high-quality electricity supply:*

- *Connection of new consumers in a manner, required by the law;*
- *Maintenance of grid infrastructure in good working order;*
- *Alignment of revamping and greenfield construction plans with development plans of the regions serviced by the Company;*
- *Implementation of revamping and greenfield construction provisions of the Rosseti's Technical Policy;*
- *Use of advanced machinery and equipment, breakthrough technologies and materials in maintenance and repair programs;*

- *Generation of the Company's perspective development plans in consort with the Strategy*

*2) Provision of reliable and safe performance of the grid complex:*

- *Enforcement of equipment's compliance with regulatory technical documentation and bylaws of the Company;*
- *Use of modern monitoring systems and testing devices to keep track of network equipment;*
- *Use of advanced engineering systems, able to localize fault places and switch power supply to alternative lines;*
- *Implementation of long-term enhancing equipment performance target programs as a part of the production and investment programs;*
- *Achievement of the reliability level set by the regional energy commissions;*
- *Bulk power supply failure plateauing.*

*3) Deployment of the most efficient grid infrastructure, compliant with global standards:*

- *Adaptation of innovative equipment and materials;*
- *Minimization of commercial network losses as smart metering systems are rolled out;*
- *Minimization of technical network losses due to optimized network configuration and deployment of energy efficient equipment and materials;*
- *Enforcement of global ISO 9001, ISO 14 001, OHSAS 18 001, ISO 50 0001 standards on quality, safety and*

environment.

4) Energy tariffs, affordable for the Russian economy and fostering investment prospects.

Goals for 2018:

1. Prevention of industrial injuries, minimization of injuries suffered by outsiders.
2. Enforcement of reliability and quality of service indicators set by the regional regulators.
3. Connection of consumers, ready to be connected to the Company's networks, in a timely manner.
4. 100% automation of maintenance and repair scheduling process (for all equipment categories).
5. Reduction of actual per-unit investment costs for high-priority capital construction (refurbishment) facilities to be fully launched in 2017, compared with the target figures.
6. 3%YoY cuts of operating expenses, adjusted for equipment quantity.
7. Achievement of the GRR that includes all economically justified expenses.
8. At least 95% accomplishment of the investment-program-facility launch index.
9. Enforcement of energy efficiency by:
  - ? Securing in-process energy consumption at a maximum of 7.96% of total supply;
  - ? Cutting consumption for economic needs by 5% against FY2016 base numbers.
10. Active staff turnover should not exceed 7%.
11. There should be no dead stock of materials or equipment at the year-end, provided that promptness of delivery is ensured.
12. Completion of the average ratio "Filed/Accepted proposals for technical improvement and efficiency proposals in branches and production departments".
13. 20%+ reduction of violations related to petroleum products spills on Company's industrial sites against FY2016 numbers.

Our end-of-the-year progress in goal achievement is as follows:

- Reliability and quality of service targets achieved;
- Share of late connection contracts reduced by 2.39%;
- In-process energy consumption is 7.65% ( $\leq 7.96\%$ ) of total supply;
- A RUB 539.108 million (or -3.4%YoY) cut of the operating expenses, adjusted for equipment quantity.

To achieve the strategic goals for 2018 and beyond we intend to:

- Prevent industrial injuries, enforce minimization of injuries suffered by outsiders;
- Enforce reliability and quality of service indicators;
- Reach 100% automation of maintenance and repair scheduling process (for all equipment categories);
- Cut operating costs 3%YoY, adjusted for equipment quantity;
- Achieve the GRR that includes all economically justified expenses;
- Accomplish the investment-program-facility launch index by at least 95%;
- Promote energy efficiency by securing in-process energy consumption and cutting consumption for economic needs.

The Company's priority implementation benchmarks are build-up of a united grid area on the territory of service by consolidating municipal grids, large-scale grids upgrade, achievement of high-level energy saving, adoption of energy-efficient technologies, build-up of smart electricity distribution system, establishment of efficient asset management and optimal environment for reliable and safe energy supply.

#### 3.2.4. Sales Area

Key sales areas:

*IDGC of Urals (OAO) transmits energy to consumers of wholesale and retail energy markets and connects natural and legal entities to networks in the Sverdlovsk, Chelyabinsk and Perm regions. The Company is a natural monopolist with state-regulated transmission and connection tariffs that occupies a dominant position on local market.*

*In the Perm region the GRR-based market share of Permenergo gained 1.1% to reach 87.3%. In the Sverdlovsk region the GRR-based market share of Sverdlovenergo totaled 66.4%. Our affiliate - Yekaterinburg Electric Grid Company (AO EESK, for short) - contributed additional 10%, driving Sverdlovenergo's market share to 77.4%. By the end of 2017 Chelyabenergo's GRR-based market share lost 2%, as the "last-mile" scheme was terminated in the Chelyabinsk region since 01.07.2017 resulting in transition of customers (PAO MMK, PAO RZhd, OOO KEMMA, PAO Chelyabinsk Metallurgic Plant) to direct payments to PAO FSK UES.*

Factors with a potential negative influence on sales and measures to diminish such influence.

*The legislation does not regulate last-mile interaction between local grid operators (LGO) and FSK UES; non-metered and non-contractual consumption may drive actual productive supply and consumption away from targets and connection may also decrease; payment default risks and, as a consequence, increased transmission receivables; large LGOs, affiliated with federal and local authorities with administrative power to consolidate grid assets, are our key competitors; large share of municipal grids with unregistered rights for property and land; regional, municipal and other state budgets have no resources to be spent on registration in the near future (2013-2017); some owners of grid assets cancel the deals breaking previous agreements or change their initial property usage plans.*

*Our possible solutions: regular analysis of factors and relevant decision-taking in abovementioned situations to diminish the influence of the factors, including but not limited to interaction with state and regional authorities to fight over the factors hindering our evolution.*

The R&D Program includes activities related to development of breakthrough technologies aimed at creating completely new developments, technologies, methods and challenges aimed at improving existing technologies. R&D expenses are set as target values to be approved every year as components of the Company's business plan. The Company's business plan for 2018-2022 (adopted by the Board of Directors, Minutes No.254 dated as of 28.12.2017) sets FY2018 R&D expenses at RUB 29.46 million. During 1Q 2018 we did not expect from R&D activities any prototypes, with no registration applications filed as no patent right registration were required.*

#### 4.6. Analysis of Trends

Key trends determining the directions for Russian grids development (according to the Strategy for Development of the Russian Electric Grid Complex reviewed by the Russian government on February 25, 2013) are:

A healthy increase of demand for energy (up to 2% per year) is one of the key trends of sector development defining the development of the Russian grids. Such pace is determined by gradual increase of energy efficiency: according to forecasts, energy consumption of the Russian economy (GDP-based) shall decrease by over 30% by 2030. Within 10-15 years Russia will implement technologies used by grids in developed countries. In particular, technologies of smart grids increasing capacity and stability of networks, decreasing losses and expenses on technical and commercial metering.

Demand differs considerably in regions and settlements. Alongside with decreased consumption in rural areas there is an increase in cities; in cities consumption decreases in industrial zones and increases in districts with office centers and commercial real estate or housing. Changes in demand geography cultivate 3 problems: 1) need to maintain unloaded networks; 2) need for new investments at new sites; 3) increased tariff due to a need for new investments while overall demand is low.

However, a demand shift has a potential for decreasing general costs on both local and interregional levels. Local level includes infrastructure de-bottlenecking in a region or a city with currently maintained high-cost generation (looping of backbone networks around cities, new supply centers). Interregional level includes infrastructure combining zones with various time period and price demand, net power flow being economically sound (for example, Siberia – Urals aerial power lines).

Scarce investments during the last 20 years resulted in a considerable physical and technological obsolescence of networks. Share of grids with depreciable life totaled 50%, with 7% of grids working for 2 standard periods. Overall depreciation of grids totaled 70%. Depreciation of backbone grids (FSK UES) is almost the same – around 50%. On the whole, equipment status in Russia is far worse than in other large countries with depreciation equaling 27-44%. Besides, Russian grids still do not widely use modern equipment providing high reliability and decreased operating costs.

Changes in regulatory documents during the sector reforms:

1. Access to WEM since 1.01.2006 for generating companies of RAO UES incorporated as a result of reforms and FSK UES. This caused review of the system for information exchange between market participants and toughening of requirements to metering in grids.

2. Approval and enactment since 1.09.2006 of the rules of wholesale and retail energy markets of the transition period (Government Decrees #529 and 530 dd. 31.08.2006). Except for changes of the current WEM and accurate regulation of all participants the regulatory documents led to changes in procedures related to payment to grids and customer relations.

3. Changes of FSK price regulation since 1.07.2006. The introduction of new principles of UNES price regulation (transition to payments for customer contract demand) enabled the grids to plan more accurately the volume and price of FSK for 2006 and years to come.

4. Changes in procedure related to the regulation of transmission prices for grids since 01.01.2008, payments for 2-rate transmission tariffs: network maintenance rate (contract demand) and loss compensation rate (actual volume of transmitted energy);

5. Continuing activities dealing with united transmission tariffs in regions, stipulated by FTS and Government documents demanded retention of existing and creation of new network boilers in 2007. The scheme, besides united transmission tariff in a region demands contracts on energy transmission to end-users concluded with all grid companies in the region.

In 2014 in our service area there were 4 network "pies".

The following factors have a significant impact on the industry: velocity of reforms, namely readiness of regulatory documents; purchasing power from consumers; technical status of production capital funds.

#### 4.7. Analysis of Factors Affecting Operations

Energy reform and considerable state regulation of the sector (also covering tariff regulation) are the key factors with an immense impact on the sector, issuer and other market players.

The factors and conditions with intensive influence on the Issuer's activities are stated below:

- Overstatement of contract demand volume used for calculating electricity transmission tariffs, as compared to the volume from the Federal Tariff Service forecasted balance;
- Consumer refusal to pay for the transmission services in line with the contracted demand used for calculating tariffs due to reduced electricity consumption;
- Reduced figures of actual consumption, as compared to the figures used for calculating tariffs;
- The FTS's approval of ultimate transmission tariffs ignoring required financial costs spent to enforce reliable and non-stop operations and further development of the Company;
- Incident increase due to asset depreciation. Physical depreciation and technological aging of the fixed assets, toughening of requirements for reliability and fail-safety, increase of possible severe accidents as a result of facility destruction, call for a special attention to the issues of reliability and security of assets.
- conclusion of direct contracts with consumers connected to the UNES infrastructure.

*These factors are constituent parts of overall development tendency of the energy market. In Issuer's opinion, they are capable to have a short-term impact on the Issuer's business in a mid-term perspective. The Issuer currently actively invests in obsolete equipment upgrade, infrastructure development and launching new facilities. In the Issuer's opinion, the following measures on mitigation of negative factors and conditions will be effective at present and future:*

- *Creation of conditions and prerequisites for investments into the sector;*
- *Joint activities on adjustment of regional development plans for more accurate and precise energy sector development;*
- *Increase of regional energy sector efficiency;*
- *Creation of united grid area using statutory integration of regional networks into the Company's networks to increase reliability of energy supply.*
- *achievement of optimal economically feasible tariffs for energy keeping the balance between interests of grid companies and consumers.*

#### 4.8. Peers

*The Company is a natural monopoly with state-regulated electricity transmission and connection tariffs and a dominant position on the service area. Consumption increase and connection of new consumers triggers the market expansion. The service area is also abundant in small municipal and private grid operators that transmit electricity mainly through low-voltage networks. Due to the specificity of each region - consumer structure, individual aspects of economic growth, etc. - the GRR-based market share of our branches differs.*

*OAO IDGC of Urals consolidates grid assets to shape a united grid area on the territory of the Company's operations helping create a single point of responsibility for reliable and high-quality electricity supply and providing additional possibility to connect new consumers to the consolidated networks. Primary means of grid asset consolidation are:*

- *For non-commercial organizations and individuals: donation agreements. Conditions of grid asset transfer are very simple for a filer, transfer applications may be accepted in electronic form through the corporate web-site. Volume of donated grid assets in 2017 totaled 340 c.u.;*
- *For commercial organizations (developers, industrial enterprises, etc.): acquisition of grid assets on account of debt repayment on contracts regarding on-line maintenance and other services (206 c.u.);*
- *Acceptance of no-man's grid assets under court decisions (240 c.u.).*

## SECTION V. DETAILS ON MEMBERS OF MANAGEMENT AND CONTROL BODIES. BRIEF PERSONNEL OVERVIEW
